

DIGITAL LITERACY PROJECT

NAME: BHUMIKA KOTHARI

REGISTRATION NUMBER: 25BAI10951

BRANCH: B.TECH Computer Science and
Engineering with
Specillization in AIML

YEAR: 1st year (2nd Sem)

DATE: 27 th MARCH 2026

REPORT

Introduction:

In today's digital era, technology has become an important part of our daily lives, especially for students. Whether it is studying online, sharing information, applying for internships, or communicating with teachers and friends, almost everything is connected to digital platforms. Because of this, understanding how to use technology wisely and responsibly has become very important. Digital literacy is not just about using devices, but also about using them in a safe, smart, and meaningful way.

This project was created with the aim of developing awareness and practical skills related to digital literacy. As a Digital Ambassador, I explored different areas such as designing an awareness infographic, building a professional digital portfolio, practicing coding on online platforms, and learning how to use collaboration tools like Google Workspace. I also learned the importance of professional communication through emails and social media etiquette, which plays a big role in building a positive online identity.

Along with this, I studied real-life cyber risks like identity theft, which helped me understand how important it is to stay alert while using the internet. Small mistakes like clicking unknown links or sharing personal information can lead to serious problems.

Overall, this project was a valuable learning experience. It not only improved my technical and communication skills but also made me more responsible as a digital citizen. It has prepared me to use digital tools confidently and guide others in using them safely and effectively in their academic and personal lives.

TASK 1:

I created my Digital Literacy Awareness infographic using **Canva**, as it is simple to use and provides many ready-made templates and design elements. My infographic focuses on three main areas: what digital literacy means, useful digital tools, safe internet practices, professional presence, email etiquette for students. I explained digital literacy as the ability to use digital devices, platforms, and informations responsibly and effectively. I also included tips like using strong passwords, avoiding suspicious links, and protecting personal information to highlight online safety. Additionally, I mentioned tools such as Google Docs, Zoom, and online learning platforms that help students and teachers in their daily academic work and in all other sectors also it is helpful.

While designing, I tried to keep the layout clean and visually appealing by using icons, short text, and proper color combinations so that the information is easy to understand at a glance. One thing I found interesting was how small design choices, like font size and color contrast, can make a big difference in readability and it grasp eyes of the person. However, it was a bit difficult to fit all the important information into a single page without making it look crowded. Overall, this task helped me better understand both digital literacy and basic design skills.

TASK 2:

For this task, I created and updated my profiles on **GitHub, LinkedIn, and Kaggle**. Each of these platforms serves a different purpose in building a strong digital presence. GitHub is mainly used to showcase coding projects and track my progress as a developer. I created a profile README where I introduced myself, mentioned my branch and year, and wrote about my goal to improve my programming and problem-solving skills. LinkedIn is a professional networking platform, where I completed my education details, including my degree, college, and expected graduation year, to make my profile look more complete and professional. Kaggle is useful for data science and machine learning practice, where I can learn from datasets and participate in competitions.

Over the next four years, I plan to actively use these platforms to grow academically and professionally. On GitHub, I will regularly upload my projects and assignments to build a strong portfolio. On LinkedIn, I aim to connect with professionals, explore internship opportunities, and share my achievements. On Kaggle, I want to practice data analysis and improve my skills by participating in challenges. Overall, these platforms will help me build my digital identity and help me to prepare for future career opportunities.

TASK 3:

PART A:

For this task, I chose **HackerRank** as my coding practice platform because it is beginner-friendly and offers a wide variety of problems across different programming languages. After creating my account, I explored the interface and attempted a beginner-level challenge called “Solve Me First.” This problem helped me understand how the platform works, including writing code, running test cases, and submitting solutions.

Completing the challenge gave me confidence and a sense of achievement, especially as I was able to see my solution pass all the test cases successfully. HackerRank also provides a structured way to improve coding skills step by step, which I found very helpful as a beginner. The platform tracks progress and encourages consistent practice through challenges and badges.

Through this activity, I realized that regular coding practice is essential for improving problem-solving skills and logical thinking. In the future, I plan to continue solving more problems on HackerRank, gradually moving to higher difficulty levels. This will not only help me strengthen my programming skills but also prepare me for technical interviews and competitive coding environments.

PART B:

For this task, I explored both coding practice platforms and cloud collaboration tools to better understand how they can support students in learning and teamwork. I used **HackerRank** for coding practice, where I created an account and completed a beginner-level challenge. This helped me experience how such platforms improve problem-solving skills and logical thinking through regular practice. It also showed me how students can track their progress and build confidence in programming step by step.

For collaboration, I used **Google Workspace tools**, especially Google Forms and Google Sheets. I created a Digital Literacy Awareness Quiz with five questions and learned how responses are automatically recorded and organized. This made me realize how useful these tools are for collecting data, sharing ideas, and working efficiently in groups.

Overall, this task helped me understand the importance of choosing the right platforms for different purposes. Coding platforms help in skill development, while collaboration tools make teamwork and information sharing much easier. In the future, I will use these tools regularly for my academic work, group projects, and self-improvement, and I can also guide my peers in using them effectively.

TASK 4:

PART A:

For this task, I focused on understanding and applying professional email etiquette by drafting two formal emails. The first email was written to a professor requesting an extension for an assignment deadline. In this email, I made sure to include a clear subject line, a polite greeting, and a respectful explanation for the request. I also ensured that the tone remained formal and sincere, while briefly mentioning the reason for the delay and requesting consideration.

The second email was addressed to an internship coordinator, expressing interest in a summer internship opportunity. In this email, I introduced myself, mentioned my academic background, and showed my interest in gaining practical experience. I also highlighted my willingness to learn and contribute, keeping the message concise and professional.

Through this task, I learned the importance of clarity, politeness, and structure in professional communication. I paid attention to proper formatting, including subject lines, greetings, paragraph organization, and formal sign-offs. This activity helped me understand how to present myself respectfully and confidently in formal situations. In the future, these skills will be very useful when communicating with professors, employers, and other professionals.

PART B:

In today's digital world, poor communication on social media can easily create misunderstandings and even serious problems. One common situation could be a student posting a negative or disrespectful comment about their college or a teacher online. Even if it was meant as a joke or written in frustration, such a post can be seen by others, including faculty members, and may harm the student's reputation or lead to disciplinary action.

This kind of situation could have been handled differently by thinking before posting and maintaining a respectful tone online. Instead of expressing frustration publicly, the student could have addressed the issue privately or communicated directly with the concerned person in a polite manner. It is important to remember that digital content can stay online permanently and reach a wide audience.

This task helped me understand that responsible digital communication is not just about what we say, but also how and where we say it. Being mindful, respectful, and professional online is essential for maintaining a positive digital identity.

TASK 5:

PART A:

Identity theft is a type of cybercrime in which a person's personal information is stolen and misused without their consent, usually for financial gain or fraudulent activities. This information may include names, phone numbers, bank details, Aadhaar numbers, or login credentials. Cybercriminals use various methods to obtain such data, often targeting individuals who are less aware of online risks.

A typical identity theft scenario begins with phishing, where a victim receives a fake email, message, or link that appears to be from a trusted source like a bank or online service. When the victim clicks the link, they are directed to a fake website and asked to enter sensitive information. Once the details are submitted, the attacker collects and stores this data. In the next step, the cybercriminal uses this information to access bank accounts, make unauthorized transactions, or even create fake accounts in the victim's name.

Students, elderly people, and individuals who frequently use online services without proper security awareness are common targets. The consequences of identity theft can be serious, including financial loss, damage to personal reputation, and emotional stress. In some cases, it may also take a long time to recover from such incidents.

This case study highlights the importance of being cautious online, verifying sources before sharing information, and using strong security practices to protect personal data.

PART B:

While researching identity theft, what surprised me the most was how easily personal information can be stolen without the victim even realizing it. Simple actions like clicking on unknown links, using public Wi-Fi without protection, or sharing OTPs can lead to serious consequences. I also found it alarming that attackers can misuse stolen data not just for financial fraud but also to create fake identities, which can damage a person's reputation and take a long time to resolve.

One habit I will personally change is being more cautious while sharing any personal or financial information online. I will make sure to verify the authenticity of websites and messages before entering sensitive details. I will also avoid saving important information on unsecured platforms and start using stronger passwords along with two-factor authentication wherever possible. This task made me realize that staying safe online requires constant awareness and small but important precautions in daily digital activities.
